Alvaro: bismillahirrahmanirrahiim, Assalamualaikum Warahmatullahi wa barakatuh.

Yafeth: (wa, alaikum salam warahmatullahi wa barakatuh)

Asep: (wa, alaikum salam warahmatullahi wa barakatuh)

Alvaro: good night friends !!

Asep: good night Al !!

Alvaro: we are from the G-group, the first day would like to comment .., would like to discuss why the application is having problems. Well, I tried the Share Screen first. Well, we've selected the application, we've discussed, and the application we chose is ....

Asep: ... English Indonesian Translator

Alvaro: yes. Well this is the application we chose, maybe we just comment on it. Well maybe who did it start first?

Yafeth, I'll go first !!

Alvaro: ok yafeth brother please !!
Yafeth: From my point of view, this application is less attractive in terms of appearance because it only uses two colors and the icons are not vivid, so the colors are changed and then shaped, it looks simple. That's all from me.
Alvaro: ok, maybe from Asep Virgo.
Asep: in my opinion, this application is very simple, yes ... yes, yafeth said, the first one in my opinion this application only covers one page, so if we judge the difference between Google translate it's not much different, so if you can say, we can judge us as users better to use google translate instead of this application "English Indonesian Translator", why? If Google translate doesn't need to download anymore, you don't need to download the application again because it's already built in from Google, while

the "English Indonesian Translator" application is an application, so if the user wants to use it, it has to be downloaded again but the quality isn't much different. google transllate, it's better to use google directly. The second one is true Yafeth, in terms of appearance it is very simple, it looks only dominated by white and black. You can see, the application is the visual design, just looking safe, because of what? Black and white colors are commonly used, so as those who want to develop ideas for this application, it is better if the colors are improved with good color mixing so that it looks attractive and users who see it will be comfortable using this application, as well with its features, with its interactive design, the features used and here are very few, only in the form of share and copy paste. still need

additions so that users can feel comfortable being spoiled by the existing features. That is all.

Alvaro: ok, maybe I also agree with the opinion and yafeth, the first is the problem in this application, the first is design, in terms of design, the second is in terms of comfort, the third is in terms of features. Well, the first one is the design first, what I want to discuss. Ok, the design here is very simple, it only uses two colors, from the design itself, it is very stiff. Well that's in terms of design. Then in terms of features, from the features themselves, it's no different from Google Translate in the browser. So if the user is asked to choose the same application as the browser and the application, the user will definitely choose from the browser because it doesn't bother downloading and it looks the same, even it looks better from the browser. Well then the third one is in terms of comfort. Well, maybe we as users are not comfortable seeing the link again to the design itself, the design is still very simple. Well

maybe that's from us. Nahh according to the opinion of my friends, from Asep and Yafeth. What should be changed? Come on from Yafeth first !! Yafeth: Maybe it's from me, we add icons holding sound truss sharing icon. Alvaro: In my opinion, we have to improve the design again and then for adding pages, the first one must have a process like that, there is a loading page, then there is a main page (main menu) like this, with the appearance we beautify again, then the last one in my opinion. The story feature is added so if we've already translated a word, then we can easily find the history, so I'm tired of typing again, just search in the history. Maybe that's just the time, maybe there are more from Yafeth's brother? Yafeth: maybe that's all

Alvaro: okay, how about from Asep? Asep: well, if my input is yes, the first is of course from a visual point of view, the color is very important, the color is very

important in the application. So the color change in the application display needs to be revised again. Likewise with the innteractive design and the features need to be added. For colors, you can combine several types of colors to make it look more beautiful, such as bright and bright colors, the important thing is not one color, so that we as users don't get bored using the application. Second, from an interactive point of view, we also need to review all the possibilities that exist, we need to consider what if our user is still blind to English words, for example the word "to indonesian" if from my suggestion it is better to change to "to Indonesia "while" to English "is okay. So that to Indonesia, it is necessary to adjust it to Indonesians and to users who are still blind to English. The third, for existing features, still needs to be added.

This is fine for features but, we still need to add

The application needs to pamper the user too, so that the user does not switch to another application. For the output features, there is a mic, share, and copy. Well, in my opinion, it is also necessary to add a microphone, add a camera, etc. for these two parts, input and output so that they both have features that spoil the user. That's enough from me. The application needs to pamper the user too, so that the user doesn't switch to another application. For the output features, there is a mic, share, and copy. Well, in my opinion, it is also necessary to add a microphone, add a camera, etc. for these two parts, input and output so that they both have features that spoil the user. That's enough from me.

ASEP: SO I WANT TO ASK THIS WHAT IS THIS DESIGN TECHNOLOGY?

ASEP: FROM ALVARO FIRST

ALVARO: FROM MYSELF I USED VIGMA

ALVARO: GYM EDITOR

ALVARO: THAT IS FOR MY EDITING

ASEP: THAT'S DIFFERENT HOW

ALVARO: FOR OWN FIGMA IN THE BEGINNING BECAUSE I WAS NOT TOO ADVANCED

ASEP: IF FROM YAFETH HOW DOES NI MEAN?

YAFETH: IF I LOOK AS IT WAS GOTTEN CHANGED IN APPEARANCE

YAFETH: I USE PICSART

ASEP: IF YOU MAKE THE DESIGN

YAFETH: PICSART ONLY

ASEP: MEANS ONLY ONE TECHNOLOGY, YES

YAFETH: THERE MAY BE AN INSERT FROM ASEP

ASEP: IF FROM ME, I WANT TO PAKE ANYTHING

ASEP: EVERYTHING DEPENDS ON WHICH USE IS IMPORTANT ONLY USING

ALVARO: THANK YOU TO YAFETH AND ASEP
ALAVARO: THERE MAY BE A LAST WORD
KIDDING…
ALVARO: THAT WE ARE LESS MORE SORRY
